geothermal™

Energy from the Earth
Free, Abundant & Environmentally Friendly

Heat & Cool

your home for up to

70% LESS fueled
by the **SUN**

ACGEO THERMAL.COM

Today's advanced technology... proven over 40 years

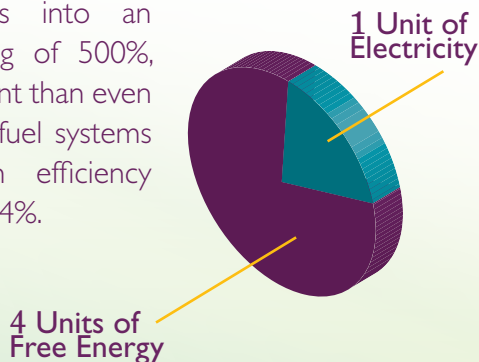

You can now heat and cool your home or business for up to 70% less. Take advantage of these savings while doing your part in dramatically reducing greenhouse gas emissions and your carbon footprint.

Obtaining an affordable heating and cooling solution is an increased concern for home and business owners alike. Escalating oil and gas prices have driven consumers to seek alternative methods that are more cost effective, energy efficient and environmentally friendly... Solutions like Aqua Comfort Geothermal.

COMFORTABLE, SAFE AND RELIABLE

Through advanced technology and engineering we have developed design features that produce maximum results. Our systems can deliver 5 units of energy for every unit of electrical energy used. This translates into an efficiency rating of 500%, far more efficient than even the best fossil fuel systems that have an efficiency rating of only 94%.

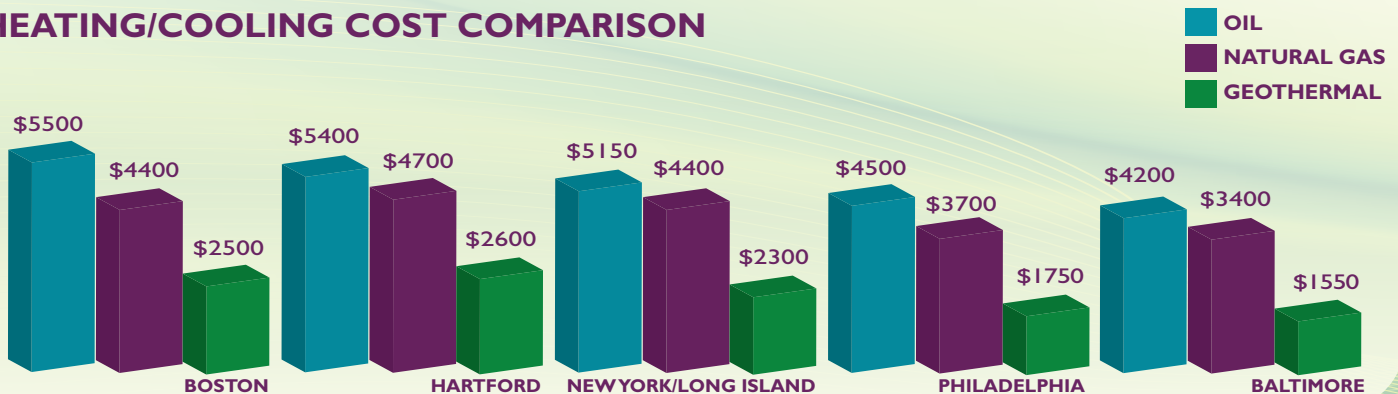

Our systems are engineered to evenly distribute temperature for maximum control and comfort. By using only the highest quality materials and most advanced processes our equipment is built for long life and optimal performance. After assembly each unit is tested to ensure efficient, cost saving performance in your home or business.

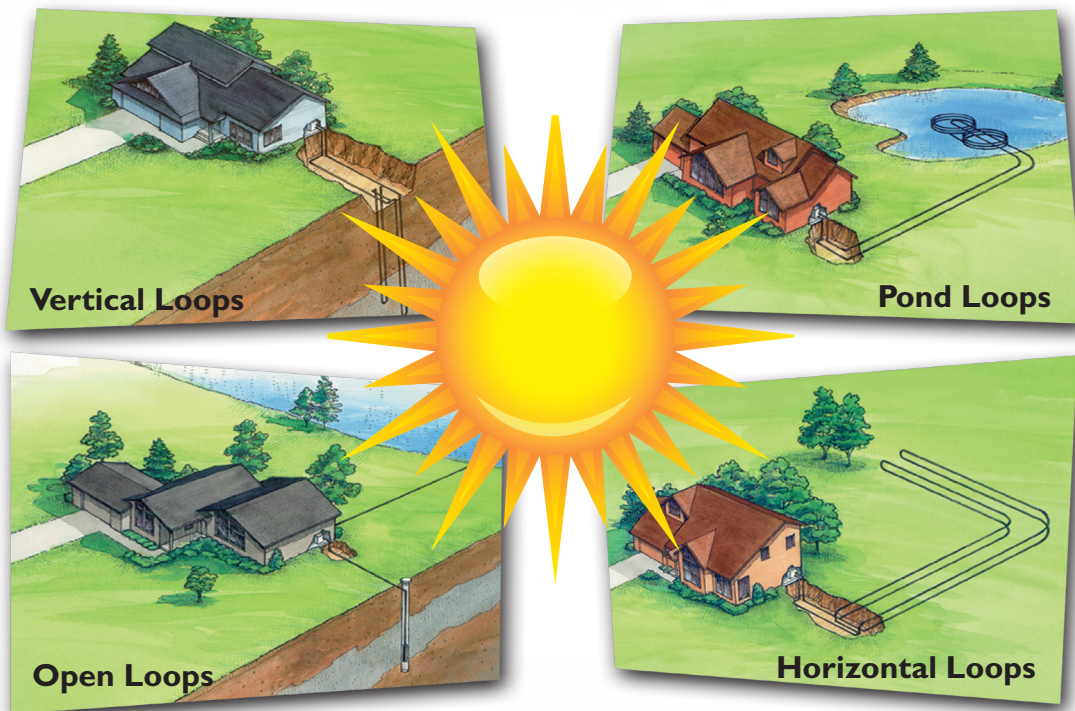

ENVIRONMENTALLY FRIENDLY

Aqua Comfort geothermal systems use the earth's "free" renewable energy, providing an environmentally friendly way to heat and cool your home or business. The earth's ground is one of the best solar collectors available. It absorbs 47% of the sun's energy that reaches our planet and our systems utilize this natural energy. Best of all, Aqua Comfort burns no fossil fuels, eliminating the risk of fire or carbon-monoxide poisoning and emits zero greenhouse gases. By reducing our dependence on foreign oil this investment is good for you, good for the environment and good for the country.

HEATING/COOLING COST COMPARISON

Loop installations for AquaComfort Geothermal applications are available in a variety of orientations, designed to best fit your particular application.

Horizontal Loops: When an adequate amount of land is available this system is utilized. Horizontal loops are installed through trenches created by our system experts.

Vertical Loops: This system is used for areas with limited space. A pair of pipes with special U-bend fittings are inserted into the ground through small diameter holes.

Pond Loops: This style is recommended for areas with a sufficient size body of water in proximity to your house. Coils of pipes are installed on the floor of the water source to capture the geothermal energy. Careful planning and execution ensures no disruption in the eco-system.

Open Loops: Locations with an abundant supply of well water generally opt for open loops. This is the most economical choice if the well has enough capacity to provide adequate supply for domestic use and the Aqua Comfort unit.

AquaComfort Geothermal units are available in a variety of models and designs to meet all your heating and cooling needs.

An **Aqua Comfort Geothermal System** is the ideal solution to high energy costs. There are no harmful emissions because the system does not use natural gas, propane or oil. Our systems also help conserve the earth's precious resources that are rapidly depleting. Aqua Comfort systems are great for our country by reducing our dependence on foreign oil products. Geothermal systems are recognized by the EPA and Department of Energy as the most environmentally-friendly heating and cooling technology available today.

All Aqua Comfort units are performance-certified by the Air Conditioning and Refrigeration Institute, safety listed by ETL and exceed performance standards for the ENERGY STAR rating.

Start saving immediately!

State & Federal tax credits & rebates are available for geothermal heat pump applications.
